

5 MINUTE INSTRUCTIONS MAKE YOUR OWN OBJECT PERMANENCE BOX

Step 1: Find a cardboard box whose size fits with the object you will be posting into and cut off, but save for later, one of the flaps. (larger object = larger box)

Step 2: Seal the box on 3 sides and cut off the flap on the 4th side. (Horizontal or Vertical is up to you and the stability of the box to stand up)

Step 3: Cut an opening across the sealed back above the side that has been left unsealed. (This will be your exit point)

Step 4: Take the flap that you cut off in step two and stick it inside of the box in the exit you created in step 3 to create an internal exit ramp.

Step 5: Its now time to cut the posting holes. Cut them according to the size of the object and cut as few or as many as you like. (the holes can be on the front, back or both it is completely up to you but i would recommend with younger children to start with the exit on the same side as the holes so that the object comes straight back into their line of site after its been posted.)

Step 6: Stand your box up so that the exit is at the bottom and the posted object can fall down and out along the ramp back into the view of your child.

Step 1

Step 2

do not seal the end that you removed the flap from

Step 3

Step 4

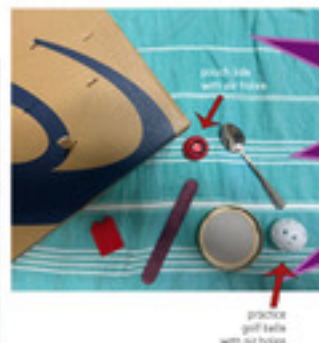

Step 5

Step 6

examples of objects to use from around the house:
yoghurt/puree pouch lids
Large jar lids
Paddle pop sticks
Duplo blocks
Teaspoons
Jenga blocks/building blocks
rolled up socks
tennis balls
practice golf balls

ALTERNATIVE:
CUT HOLES
IN AN EASY
TO OPEN SHOE BOX
